

Manure Transfer Log

Instructions: Complete this form to record transfers of manure from the source location to another location, and to maintain records for temporary stockpiles prior to land application; manure packs and mounding in the feedlot are not considered stockpiles. Manure for stockpiling must be stackable (at least 15% solids), and not produce any runoff when stockpiled. Records must be maintained for at least 3 years.

Temporary stockpiling for up to a year is allowed without a permit or EHS review/approval, provided that:

1. Stockpile is adjacent to the site of application;
2. Size of the pile does not exceed what can be agronomically applied to the site, up to a field size of 320 acres;
3. Site is moved each year, having vegetative cover for at least one full growing season before reuse;
4. Soils at the stockpile site are not sandy loam or coarser;
5. Site does not have features of karst topography;
6. Site is not within 2 feet of the water table;
7. Site is not on land that has a slope more than 2%;
8. Site is not within 300 feet of waterways (including ditches) or within 100 feet of a domestic well; and,

Use a separate table for each stockpile location, indicating the PLS coordinate information for each stockpile. The first date entry indicates the date of stockpile initiation. Additional records are required for sites with land application during the winter/frozen conditions.
